

LINK ALL YOUR SITES TOGETHER INTO ONE PHONE SYSTEM

Multi-site

Using either one of my feature packages, or your existing phone system, connect all your sites together and benefit from free calls between them.

I can configure inbound numbers to ring across multiple sites and you can short dial between them. With my multi-site feature you can unify all your sites into one phone system.

Key benefits

- Free calls**
 As all sites are part of one single phone system, even if you are using a third party PBX, all calls between sites are free.
- Single system**
 Combining a mixture of my feature packages and SIP channels into an existing phone system, I can bring all your sites together to form a single system.
- Inter-site routing**
 As all sites are linked, inbound calls can be distributed across multiple sites allowing users from different sites to answer calls on the same number.
- Extension dialling**
 Save time by short dialling your co-workers not only within the same premises but across multiple sites.
